PROFILE SUMMARY

Full Stack Developer experienced in building and maintaining web applications using React.js, Node.js, Express.js, and MongoDB. Hands-on experience with REST API development, real-time messaging, authentication, role-based access control, caching, production troubleshooting, and application performance testing.

SKILLS

Programming Languages: Java, JavaScript
Backend: Node.js, Express.js, REST APIs
Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS
Database: MongoDB, SQL, MySQL, IndexedDB
Testing and Monitoring: Playwright, Lighthouse, Winston, Postman
Tools and Deployment: Git, GitHub, Nginx, APIDog
Core Concepts: Authentication, Role-Based Access Control (RBAC), Caching, Message Queues, Event-Driven Communication, Database Indexing, API Development

WORK EXPERIENCE

Sporada Secure India Private Limited | September 2026 – Present

Full Stack Developer

- Develop and maintain a multi-user WhatsApp application using React.js, Node.js, Express.js, Socket.IO, and MongoDB, supporting messaging, chat synchronization, group management, and real-time updates.
- Develop REST APIs for QR-based authentication, message delivery, bulk messaging, group management, message-status tracking, and external service integrations.
- Implement a supervisor–worker backend architecture with worker recovery and restart mechanisms to improve process resilience and isolate worker failures.
- Implement FIFO message-processing queues with acknowledgment tracking, duplicate-event handling, and crash-recovery mechanisms to preserve queued work and improve delivery reliability.
- Implement role-based access control and grid/branch-based group allocation; optimize chat rendering through selective virtualization and improve media handling with IndexedDB storage and historical media recovery.
- Implement structured logging with Winston, centralized error handling, automated server-failure email notifications, and production deployment configuration using Nginx.
- Conduct API and Socket.IO connection tests using APIDog, optimize frontend performance using Lighthouse, and validate application workflows with Playwright, achieving 20/20 passing tests in 13.2 seconds with zero reported errors or flakiness.

OpsMonsters Software Consultants | October 2025 – November 2025

Associate System Engineer Trainee

- Developed and enhanced production features using React.js, Next.js, and REST APIs in collaboration with backend services.
- Integrated REST APIs and built reusable components for the TraderLogs module.
- Resolved 50+ production UI and functional issues, improving application reliability and user experience.
- Collaborated through Git workflows, including branching, code reviews, and merge-conflict resolution.

PROJECTS

Multi-User WhatsApp Application

Technologies: React.js, Node.js, Express.js, Socket.IO, IndexedDB, Playwright, Nginx

- Replicated the WhatsApp Web interface in React.js and extended it with business-specific workflows for multi-user messaging and group management.
- Integrated WhatsApp Web sessions with backend services for QR-based authentication, session persistence, chat synchronization, and message-history retrieval.
- Organized backend functionality into modular components for WhatsApp client management, chat operations, business logic, and application state.
- Integrated Socket.IO and Server-Sent Events (SSE) for real-time communication and server-to-client updates across their respective workflows.
- Integrated the production frontend build with the Node.js server and configured static asset serving and Nginx reverse-proxy routing.

Habit Tracker App – Next.js, Express.js, Node.js, MongoDB

Live Demo: https://habit-tracker-client-bay.vercel.app

- Built a full-stack habit-tracking application with JWT and Google OAuth authentication using a modular MVC architecture.
- Developed REST APIs with authentication middleware, schema validation, optimized MongoDB queries, and compound indexing.
- Improved performance through API caching, centralized error handling, lazy loading, and optimized state management.
- Implemented weekly, monthly, yearly, and all-time progress analytics using reusable, responsive components.

Shell-to-Node Server Generator – Shell Script + Node.js

CLI tool to auto-generate Node.js server boilerplate with folder structure and dependencies. Speeds up project initialization for backend development.

Mini Projects - Blackjack Game, Calculator, Chrome Extension (Tab Saver) using HTML/CSS/JS.

EDUCATION

Bachelor of Computer Applications (2023 - 2026)

RVS College of Arts and Science

HSC in Computer Science (2020 - 2022)

RVS Matriculation Higher Secondary School

WORKSHOP

Co-led Web Development Workshop for 50+ students – HTML, CSS, JS fundamentals, HTTP concepts.

CERTIFICATIONS & ACHIEVEMENTS

- Scaler Academy – Java DSA Certification
- 1st Prize (2025) & 2nd Prize (2024) in inter-college coding competitions (Team Co-lead)

LANGUAGES

Tamil, English, Marathi
